

Installation

Install Node js at <https://nodejs.org/en/download/prebuilt-installer>

Once that is completed

Install python 3.12 found at <https://www.python.org/downloads/release/python-3120/>

Check the "add to path" box at the start of the installation

Once completed

Run the Start.bat as an admin

Operation

Navigate to the following link to access the application:
<https://pdfconverter1.github.io/CarigenPDFconverter/>

Once the page is open, you will see the following UI.

Select a Folder Containing PDFs

Choose Folder

①

④

Convert Diagnostic

Convert Paternity

Upload Invoices

⑦

⑤

Choose Folder

Select a Client

Choose a client... | ▼

⑥

Choose Existing File or Enter Name of New File

Choose File

②

OR

Enter New File Name here...

③

1. Choose Folder: This will open a window allowing you to select a folder containing pdf. Note* The PDFs will not be visible inside the folder when selecting.
2. Choose File: This will open a window allowing you to select a file to append the PDF information to.
3. Enter New File Name: Entering any text in the field will create a new Excel file and append the PDF information to it.
4. Convert Diagnostic: This will use the selected folder and convert the information from each PDF to an Excel (The chosen file). This excel is saved in a folder named "BILLING" in the documents folder. Only works with diagnostic data.

5. Convert Paternity: This will use the selected folder and convert the information from each PDF to an Excel (The chosen file). This Excel is saved in a folder named "BILLING" in the documents folder. Only works with paternity data.
 6. Choose a client: This is a list of the labs.
 7. Upload Invoices: This uses a selected Excel file and a chosen client. Once clicked it will upload the data from the Excel file to QuickBooks
